

THE ORGANISATIONAL BENEFITS OF VMWARE TRAINING

In a globalised and hybrid world, organisations put their hope in the cloud as a means of ensuring secure, transparent and easily accessible systems. As an accredited VMware partner, QA has seen first-hand the challenges this creates.

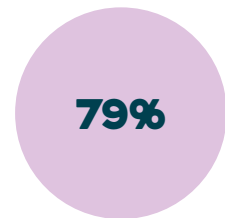

Recent surveys have shown:

Of respondents are “very satisfied” with their cloud outcomes. (1)

Of respondents indicated that integration with existing systems was a hurdle. (2)

Of companies have experienced a cloud data breach. (3)

Your people are your greatest asset: they already understand your business and its systems. With VMware best-practice training, they can capitalise on this knowledge to innovate existing systems and bring them **into harmony with your VMware products.**

Moving from the cloud to your cloud

VMware training pathways cover the skills needed to both **innovate on-premises systems and migrate into the multi-cloud world.**

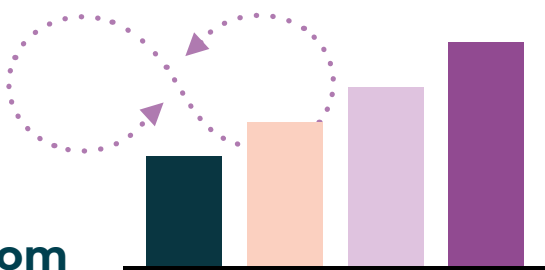

Put simply, you can align the cloud with your business objectives **and turn the cloud into your cloud.**

Implement, maintain, optimise, mitigate

Make sure that your cloud and on-premises systems **are working in-harmony and delivering consistent business-value.**

From backend to frontend, **the 6 VMware learning pathways cover the core functions needed to implement successful systems,** maintain excellent service levels, optimise for increased efficiency and mitigate for security or technical issues.

Your roadmap to best-practice

Choose your career area from the following:

- Data Centre Virtualisation
- Networking Virtualisation
- Cloud Management & Automation

- Security
- End-user computing
- Application Modernisation

Each area has its own version of the below pathway

VMware Certified Technical Associate

An optional certification that provides an introduction to VMware in each of the 6 areas. The accreditation assumes you have a basic working knowledge of these generic concepts and focuses on validating your ability to apply them within a VMware solution.

VMware Certified Professional

The first required course for those looking to climb the VMware career pathway. This course is designed for IT managers who already install, configure, manage and optimise VMware solutions.

VMware Certified Advanced Professional

VMware's advanced-level certification. Aimed at professionals who design and build VMware solutions (VCAP Design) and manage and optimise VMware solutions (VCAP Deployment).

VMware Certified Design Expert

VMware's expert-level certification. Aimed at IT professionals in architect-level; roles who design, build, and manage VMware solutions. Learners can only earn their VCDX through submitting and successfully defending a production-ready VMware Solution before a panel of veteran VCDX holders.

Each level of the hierarchy has specific learning requirement based on job function and any previous VMware certifications you have taken.

We can't fit them all in here, but click the button to the right to learn more!
